Professional Summary

DevOps Engineer with hands-on experience designing, automating, and deploying cloud-native applications on AWS. Proficient in Infrastructure as Code using Terraform, containerization with Docker, orchestration using Kubernetes (K8s, K3s), and CI/CD automation using GitHub Actions and Jenkins. Experienced with Linux administration, AWS networking, monitoring using Prometheus, Grafana, and CloudWatch, and implementing scalable, highly available cloud infrastructure. Passionate about automation, cloud technologies, and DevOps best practices.

Professional Experience

TejTatv InnoTech Private Limited — Pune, India

Feb 2026 – Present

DevOps Intern

- Designed and maintained GitHub Actions CI/CD pipelines for backend services, reducing manual deployment effort by nearly 70%.
- Containerized backend applications using Docker and optimized Dockerfiles for faster image builds and consistent deployments.
- Supported deployment automation across development environments while collaborating with Dev and QA teams.
- Supported AWS infrastructure provisioning including EC2, IAM, Security Groups, VPC, and networking.
- Performed Linux system administration including user management, service management, process monitoring, package management, and troubleshooting.
- Created operational documentation and deployment runbooks to improve deployment consistency.
- Participated in deployment failures, Docker issues, networking problems, and application startup errors.
- Collaborated with development and QA teams to ensure reliable production deployments.

Notable Projects

Cloud-Native Application Deployment on AWS ECS

- Designed and deployed a production-style PHP-MySQL web application on Amazon ECS (Fargate) using Docker containers for scalable and highly available application hosting.
- Built optimized multi-stage Docker images and automated image build, versioning, and deployment using GitHub Actions and Amazon ECR.
- Provisioned the complete AWS infrastructure using Terraform, including VPC, public/private subnets, Internet Gateway, NAT Gateway, ECS, ALB, IAM, Security Groups, and Amazon RDS.
- Configured an Application Load Balancer (ALB) with health checks to distribute traffic across ECS tasks and improve application availability and reliability.
- Deployed Amazon RDS MySQL in private subnets and implemented secure networking using Security Groups and least-privilege IAM policies.
- Enabled centralized monitoring and log collection using Amazon CloudWatch to monitor ECS tasks, application performance, and troubleshoot deployment issues.
- Troubleshooted Docker build failures, ECS task startup issues, ALB health check failures, and database connectivity problems while following DevOps best practices for automation, security, and Infrastructure as Code.

Technologies Used:

AWS (ECS Fargate, ECR, RDS, VPC, ALB, IAM, CloudWatch), Terraform, Docker, GitHub Actions, Git, Linux, PHP, MySQL

- **GitHub Repository:** https://github.com/gawalishankar/Fusion_Project.git

AWS 3-Tier Cloud Infrastructure using Terraform

- Designed and provisioned a production-style 3-tier AWS architecture (Web, App, DB) using Terraform Infrastructure as Code.
- Provisioned VPC with public and private subnets to isolate web, application, and database layers.
- Configured an Application Load Balancer (ALB) in public subnets to distribute traffic across EC2 instances.
- Implemented Auto Scaling Group with EC2 instances running Nginx to ensure high availability and scalability.
- Deployed RDS PostgreSQL in private subnet with least-privilege security groups to secure database access.
- Implemented remote Terraform state (S3 + DynamoDB locking) to enable safe collaboration and state management.
- Automated EC2 instance configuration using user-data scripts to bootstrap Nginx during instance launch.

Technologies Used:

Terraform, AWS (EC2, VPC, Public & Private Subnets, Internet Gateway, NAT Gateway, Route Tables, Security Groups, ALB, Auto Scaling Group, Launch Template, RDS PostgreSQL, IAM, S3, DynamoDB), Linux, Nginx, Git, GitHub

- **GitHub Repository:** <https://github.com/gawalishankar/AWS-3tier-terraform.git>

Academic Profile

- **Master of Computer Applications (MCA)**, Savitribai Phule Pune University (SPPU), Pune 2023 – 2025
CGPA: 7.35
- **Bachelor of Computer Applications (BCA)**, Swami Ramanand Teerth Marathwada University (SRTMUN), 2021 CGPA: 8.88

Technical Skills

- **Cloud Platforms:** AWS (EC2, ECS, ECR, VPC, IAM, ALB, Auto Scaling, RDS, Route 53)
- **Infrastructure as Code:** Terraform
- **Containers & Orchestration:** Docker, Kubernetes
- **CI/CD:** Jenkins, GitHub Actions
- **Version Control:** Git, GitHub
- **Monitoring & Logging:** Prometheus, Grafana, CloudWatch
- **Scripting:** Bash, Shell Scripting, Python
- **Operating Systems:** Linux (Ubuntu)
- **Networking:** TCP/IP, DNS, HTTP/HTTPS, VPC, Route Tables, Load Balancing, Security Groups

Certifications

- **AWS Certified Cloud Practitioner (CLF-C02)** – Amazon Web Services (AWS)
- **DevOps with AWS** – Skill Ridge
